Ajibodu Raphael is a result-oriented, and award-winning Engineer with software development, software systems analysis, and architecture, and web platform development skills. He is a reliable, supportive, and enthusiastic team leader, dedicated to streamlining processes and efficiently resolving problems towards the success of any large enterprise, and SMEs domains.

## WORK EXPERIENCE

### **Freelance Lead Frontend Engineer, Wired Assurance – April/2021 – present – Canada, Toronto**

Wired assurance is a very new, and credible startup organization and IT services providers in Toronto, Canada. I am currently privileged to build several features within the company's first version client-side, admin, and users applications, and most of the tools used, and activities are as follows:

- Building with JavaScript, React.JS, Redux, and React-redux, JSX, ES6, Bootstrap, Angular.JS, node-sass, CSS4, HTML5, OOP, NPM, Node.JS, REST, API, Django, Python, Styled-components.
- Leading the front-end team to write dry, clean, and re-usable codes, supporting the customers upon technical requests, and fixing bugs where, and when necessary.
- Planning, Analyzing, Designing, Developing, Testing, Deployment, Maintaining, and optimizing cloud infrastructure costs, reducing 50% of expenses.
- Implementation of Security practices to build applications resistant to attacks, and ensure compliance with various policies and procedures, with software Automation.
- Building the back-end services using Python and Django, demonstrating service-oriented architecture, and focusing on clients' needs.

### **Senior Software Developer, Simple Finance– Feb/2020 – present – Lagos, Nigeria**

Simple Finance is one of the most important, and credible Institutions, and financial services providers in Nigeria.

- Building multi-tenant application using JavaScript, React.JS, Redux, and React-redux, JSX, ES6, Bootstrap, node-sass, CSS4, HTML5, OOP, NPM, Node.JS, REST, API.
- Leading the front-end team to write dry, clean, and re-usable codes, supporting the customers upon technical requests, and fixing bugs where, and when necessary.
- Planning, Analyzing, Designing, Developing, Testing, Deployment, Maintaining, and optimizing cloud infrastructure costs, reducing 50% of expenses relations.
- Implementation of Security practices to build applications resistant to attacks, and ensure compliance with various policies and procedures, with software Automation.

## Software Engineer, 386Konsult Ltd – May/2017 – Jan/2021 – Yaba, Lagos

386Konsult is among the most reputable, and credible I.T. Consulting, and services company, in Nigeria.

- A project of building large multi-tenant, and many-to-many client-side web application Using technologies such as; JavaScript, React.JS, Redux, and React-redux, JSX, ECMAScript, BootStrap, node-sass, CSS4, HTML5, OOP, NPM, Node.JS, REST, API.
- Leading the front-end team to write dry, clean, and re-usable codes, supporting the customers upon technical requests, and fixing bugs where, and when necessary, assisting to organize events like stand-up meetings during CTO's absence or leave.
- Planning, Analyzing, Designing, Developing, Testing, Deployment, Maintaining, and implementing the company's Internet-based applications software. Forecast, and optimize cloud infrastructure costs, reducing 50% of the total expenses related to the operations.
- Implementation of Security practices to build applications resistant to attacks and ensure compliance with various policies and procedures, with software Automation.
- Built, implemented, and maintained many user-friendly applications, while assisting the back-end services using Python and Django, demonstrating service-oriented architecture and focusing on clients' needs.
